

SENTRY MASTER

CTS CountMaster™

The Next Generation of People Counting

The History of People Counting

For centuries, shop owners and other business operators have sought to systematically track and record the flow of consumer traffic in and out of their establishments. Libraries, museums, student unions and other college resources also have a requirement to count people.

Counter Module

Sensor Unit

The earliest form of customer counting was represented by nothing more than a tic mark on a slate or sheet of paper. Then came the advent of the hand-held clicker and turnstiles.

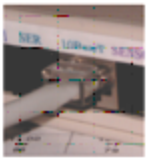

The arrival of more advanced technology saw the birth of such devices as the electronic eye and infra-red beams.

Now enter the next generation of people counting devices with Sentry Master's unique Customer Tracking System (CTS) CountMaster™. _____

KEY FEATURES

- ▶ Stores Counts by hour, day, week and month for an entire year.
- ▶ Maintains counts and time even when power is removed from unit.
- ▶ Offers a easy three button operation by using an exclusive menu orientated user friendly interface.
- ▶ Lock out feature prevents unauthorized tampering.
- ▶ CTS CountMaster™ can be used with our ReportMaster™ system for multiple unit and computer interface.
- ▶ User selectable count divisor.
- ▶ Day-Light-Savings Time is user Programmable!
- ▶ Our standard Two year warranty includes both parts and labor.
- ▶ You can add a second sensor for one way counter or to cover 2 entrances within 50 feet of each other. The counter module retains counts for both directions or each entrance independently.
- ▶ You can also add a internal WebMaster™ network interface to allow viewing of counts using a standard web browser or UDP data transfer into ReportMaster™ over any LAN, WAN or the internet.
